

SSL247®
THE WEB SECURITY CONSULTANTS

PENETRATION TESTING AND SECURITY AUDITS

A **Penetration Test**, or *penetration testing*, is a simulation of a malicious attack on a computer system, network or organisation.

SSL247® also offers security audits that complement our penetration tests. Security audits provide a complete overview of the security of your system, networks and application components, providing information that supports a more thorough penetration test.

WHAT ARE WE TESTING ?

Penetration tests and audits are compatible with all infrastructure types, regardless of the size of the company or the company's core business.

SSL247® will tailor your penetration tests according to your needs and those of your information systems with:

- External Penetration Testing
- Internal Penetration Testing
- Web Applications Testing
- VOIP
- Testing of network equipment
- Testing of mobile device security
- Architecture and configuration audit
- Social engineering

STEPS OF A PENETRATION TEST

1. Define the scope of the testing:

Specify the type of testing you want us to carry out, as well as the level of access given (black, grey or white box), and a detailed plan of when and where the testing will occur.

2. Penetration attempts and identification of vulnerabilities

3. Exploitation of vulnerabilities to determine your "tangible" risks

4. Creation of a detailed report

Vulnerability assessments and recommendations are tailored to your information system needs with an aim to provide you a means to prioritise future security actions.

WHY CHOOSE SSL247® ?

PASSIONATE EXPERTS

SSL247® penetration tests and audits are performed by passionate and experienced experts

ACCREDITED EXPERTS

Our experts hold a range of well-known IT security certificates: OSCP, OSCE and OPST

CREATIVE EXPERTS

SSL247® places emphasis on hiring technically strong consultants that have creative approaches to what they do
