

## CONTACT GREASE FOR Al AND Cu

### Application

Tube with neutral grease is used for cleaning the conductors before they are connected in order to ensure good electrical connection.

The neutral grease meets the ERDF's technical guidelines.

The grease is neutral for aluminium and copper.

The grease has the following technical characteristics:

High drop point (190°C)

Broad temperature range (-20°C up to + 120°C)

E-number	Dropping point	Operating temperature
0650000	190°C	-20°C - +120°C
