MagniLink S Premium 2

Fits all your needs

MagniLink S Premium 2 is the ultimate video magnifier for you with high standards for both quality and mobility. It offers superior image quality, modern technology and smart features. It's easy to carry and move from location to location, and it can be connected to a computer (PC/Mac/Chromebook) or monitor.

TTS
available on
Chromebook
PC and Mac!

Superior image quality

MagniLink S Premium 2 excels in brightness, sharpness and contrast, and the unit has the latest technology.

Three modes of viewing

It's easy to switch between distance and reading mode. Just turn the camera head and flip up the camera lens, and your MagniLink S Premium 2 becomes a distance camera in a second. A Mirror mode is also included.

Easy to handle

The unit has a user-friendly design with orange details that show where to grasp vital functions when using and setting up the system. Designed with tactile recognition of all main functions. All parts are made with durability, recyclability and a user-friendly feeling in mind.

Minimized footprint

The foldable support legs minimize the footprint, which makes it possible to place the unit tightly alongside a laptop, either on the left or the right side. Fits perfectly also on small tables.

If you want a more stationary system, there are three smart docking stations available!

Innovative software

The software controls the unit's features, such as magnification, artificial colors and brightness, and provides the user with the facility to make individual adjustments for the best possible experience. You can also add TTS (Text-to-Speech) as an option. Besides speech output, the TTS option provides several different reading modes for increased reading speed and endurance.

Only one cable to hook up!

The user will never worry about battery strength or misplaced battery chargers as the unit is powered by the computer.

Split screen functionality in the software

There are several different split modes to choose between. Split mode makes it possible to divide the screen image to see different things, for example the computer image in one part of the screen and the image from the distance camera in another part. This is perfect in the classroom as well as the boardroom, if you want to see what the teacher/person is doing at the board at the same time as you look at your computer.

Technical specifications:

Connections	USB 3.0 (type C), HDMI
Resolution	HD: 1280 x720 FHD: 1920 x1080
Magnification range (15.4" widescreen)	HD: 1.4x-75x-720p FHD: 1.1x-75x-1080p
