

# Basin line

## for soaking of bulky dishes

The basin line is an important product to get a good logistic flow in the wash room. The basin line is used to soak bulky dishes such as larger pots and containers. The basin line can preferably be connected to a Wexiödisk rack conveyor or a hood type dishwasher.

The basin line is made of stainless steel and available in two standard lengths, 600 mm and 1100 mm. These two lengths can be combined to suit the wash room layout. The flexible system can also be supplemented with a pistol sprayer and sorting shelves (see next page).

The basin line is equipped with short rollers as standard but can also be obtained with a slide rail for heavier goods.

As practical accessories add a waste bin on wheels and a food scraper.

STRAINER Ø160 MM  
AND SPLASH PLATE

STAINLESS STEEL BASIN LINE IN  
VARIOUS LENGTHS TO SUIT THE  
WASHROOM LAYOUT.

AVOID UNNECESSARY LIFTING  
OF THE BASKETS.  
DIRECTION INDEPENDENT.

BASIN DEPTH 300 MM  
GIVES GOOD POSSIBILITIES TO  
SOAK BULKY DISHES.

CAN BE COMBINED WITH  
A SORTING SHELF.
