

Health and Safety Measures for the Audio-Tour System

As regards social distancing:

- Our museum has implemented all required measures to meet provisions on the distance between visitors at the pickup point for the audio-tour devices by clearly marking the floor.

As regards the audio-tour device:

- The devices are provided to visitors by trained staff members from a separate counter fitted with a plexiglass screen.
- Our staff are equipped with a face shield, single-use gloves, and an antiseptic disinfectant solution of 70% isopropyl alcohol.
- The audio-tour devices and the pick-up point are regularly disinfected with a disinfectant solution of 70% isopropyl alcohol.
- Before each device is handed to a visitor, it is placed in a protective single-use gelatine case, which is destroyed when the device is returned.
- The devices are stored and charged in a protected area, not accessible to third parties.
