

Belt Trackers

Your belt back on track

less
spillage,
more
performance

CenTrax belt trackers correct mistracking of conveyor belts, on both the load carrying strand and the return strand.

The design is based on 60 years of experience in optimizing conveyor systems. This expertise lies at the heart of the CenTrax belt tracker. After installation, mistracking of your conveyor belt will be a thing of the past.

CenTrax belt trackers prevent unplanned downtime, reduce spillage and wastage, loss of valuable production time and recurring damage. Even under the most extreme conditions, the belt will always remain on the right track, regardless of the direction of belt travel.

CenTrax has excellent tracking characteristics. The belt tracker - including the swivel bearing, central roller and the two tapered rollers, is as flexible as it is robust, which makes CenTrax suitable for the toughest operating conditions and compatible with almost all belt systems.

Why CenTrax

- reduction in operational costs
- increase in safety
- prevents downtime
- prevents spillage
- prevents damage to belt edges and the conveyor belt structure
- prolongs lifetime of the conveyor belt
- 60 years experience guarantees correct diagnosis and a lasting solution

CenTrax uses a minimum of three tracker rollers: one central roller and two tapered tracker rollers. The trough angle of the tapered rollers in the load carrying strand models can be set to any angle from 0° - 47°.

➤ Tracker rollers

Wear resistant

The steel rollers are autoclaved with 8 mm thick, highly wear-resistant rubber. This process is giving a permanent and jointless bond between rubber and steel roller body. Rollers with a polyurethane lining are available for applications where high durability is required.

Explosion Proof

CenTrax is DEKRA certified for use in explosive hazard areas. In this model, the belt tracker rollers are lined with ATEX compliant rubber.

Perfect grip

All rollers have a diamond profile, to guarantee a perfect grip on the belt.

System carrier

- manufactured from high strength steel
- hot-dip galvanised
- variably adjustable in width and height

Maintenance-free

The rollers can be replaced individually but do not require any maintenance once installed.

Special models

In addition to the standard version, customised models are also available. For example, CentTrax belt trackers for belts with a V-shaped return strand, or with 5-part garland roller pairs for the load carrying strand. There is also the option to fit CentTrax to the inner strand. These special versions are available on request. By using as many standard components as possible, delivery times are kept short.

Swivel bearing

- extremely smooth running
- oil-bath lubricated bearings
- resistant to dirt, dust and moisture
- maintenance-free
- extremely long life

Features

- excellent tracking characteristics
- designed to withstand the toughest conditions
- fitted with a unique and fully sealed swivel bearing
- also suitable for reversible conveyor belts
- flexible setup, suitable for virtually any belt construction
- in combination with ATEX rollers, can be used in explosive hazard areas
- (Class I M2 and II 2D, in accordance with EC Directive 2014/34/EU)
- easy installation
- low maintenance
- sustainable
- quick return on investment
