

World-leading smartphone-powered study for people with Parkinson's, carers and supporters

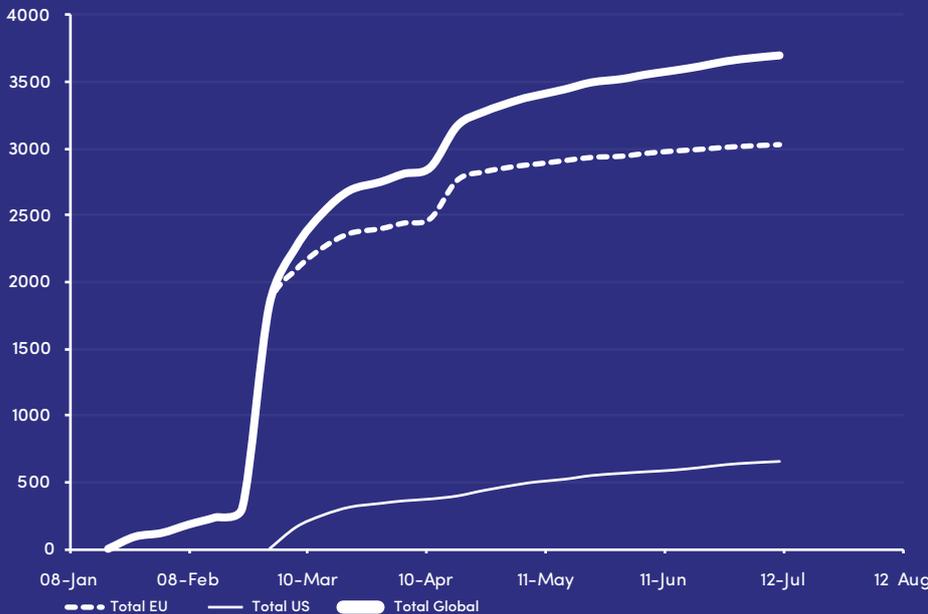

100 for Parkinson's launched in February 2016 and has built an amazing community of people from across the world tracking their health, donating their data, and making an impact for Parkinson's. Analysis starts late 2016.

What data have we captured in the first 6 months?

Uptake and interest has been incredible!

3817

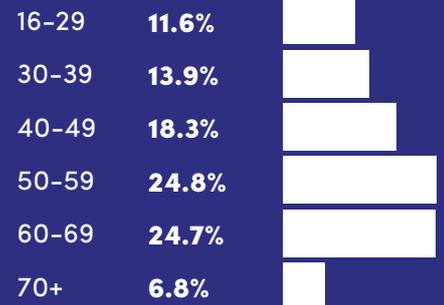

Participants

PARTICIPANT SIGN UP

People rapidly signed up to take part in the study, from every age group

AGE

Together we've already captured huge amounts of high quality data

1,774,687

patient-generated data points (excluding sensor data)

3145

EQ-5D Quality of Life questionnaire responses

1053

PDQ-8 survey responses from people with Parkinson's

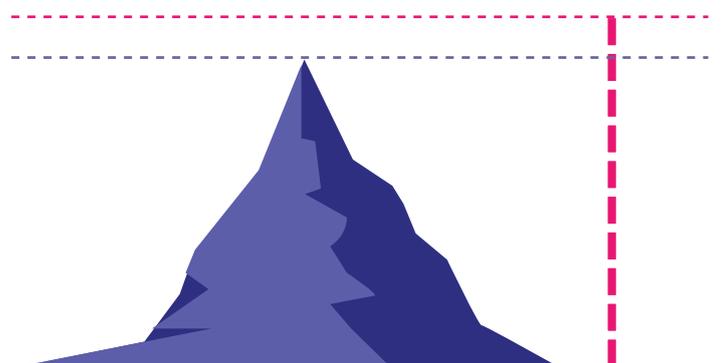

The world's largest ever BYOD study!

13,648 questionnaires digitally captured

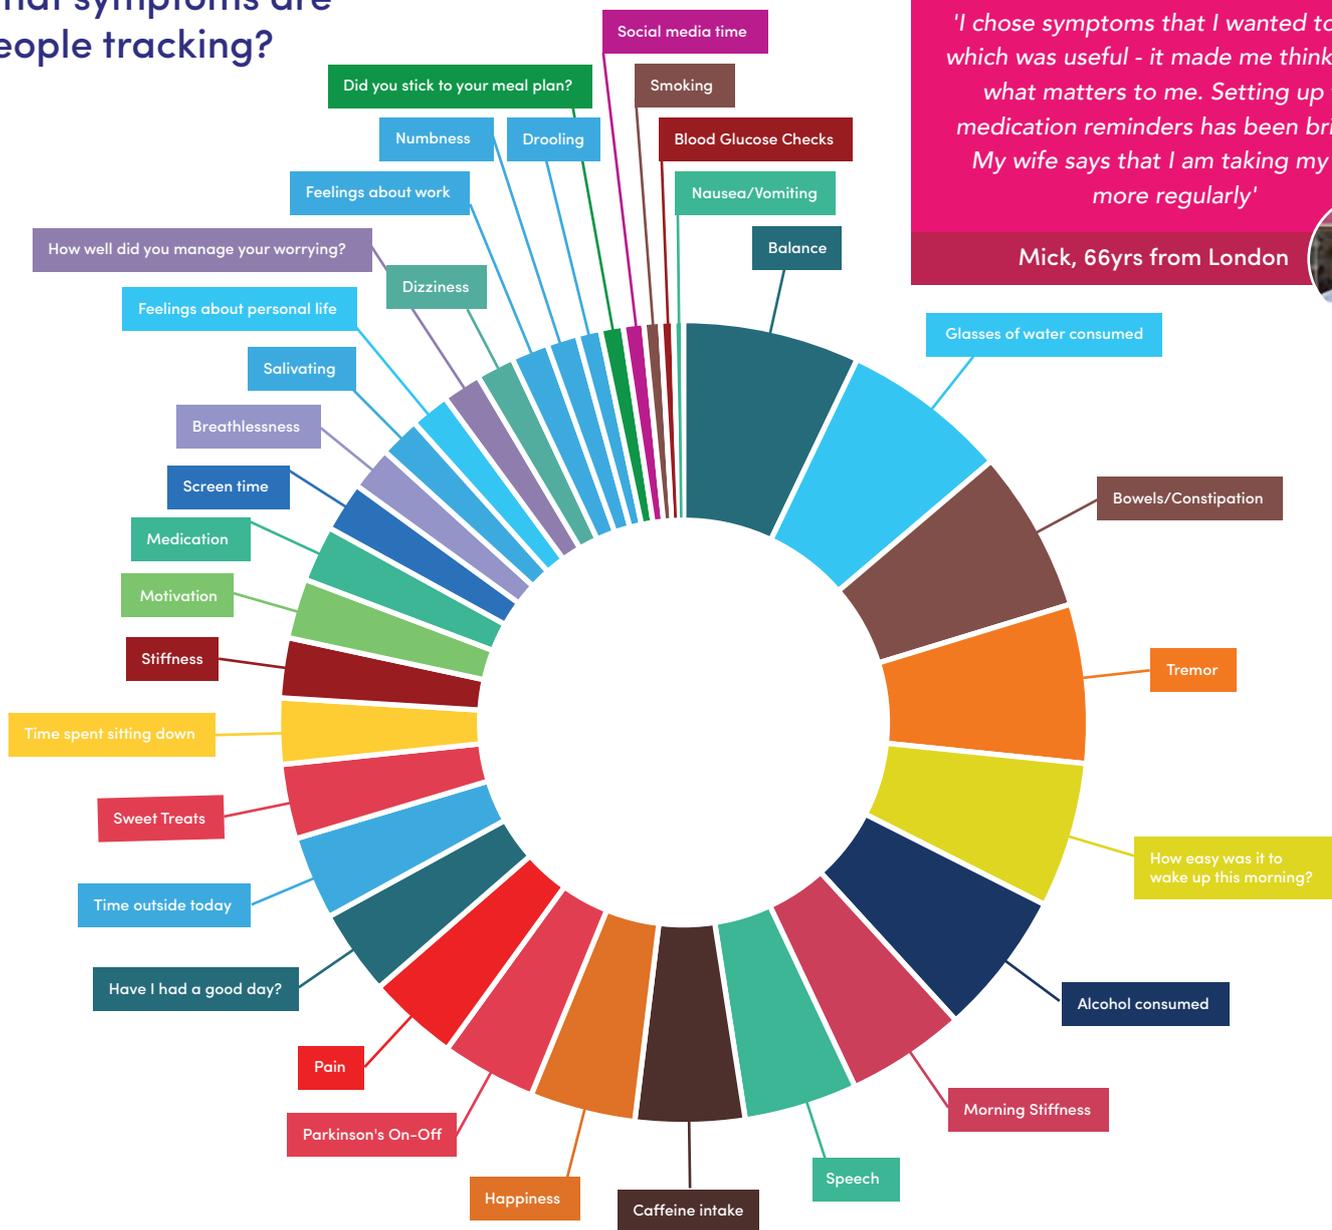

That's equivalent to **37,014** pages.

If you stood the sheets end-to-end they would be higher than Mount Everest!

What symptoms are people tracking?

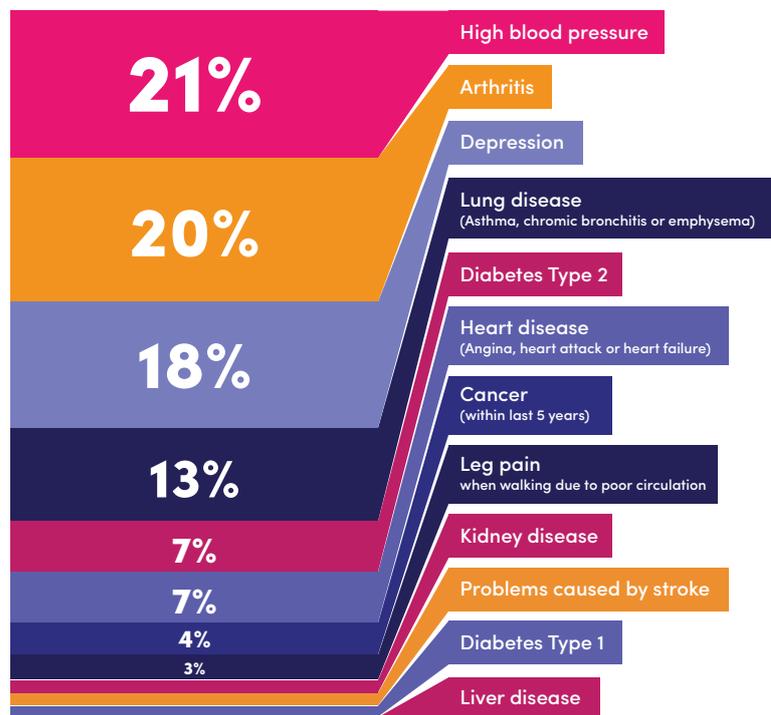

'I chose symptoms that I wanted to track which was useful - it made me think about what matters to me. Setting up the medication reminders has been brilliant! My wife says that I am taking my pills more regularly'

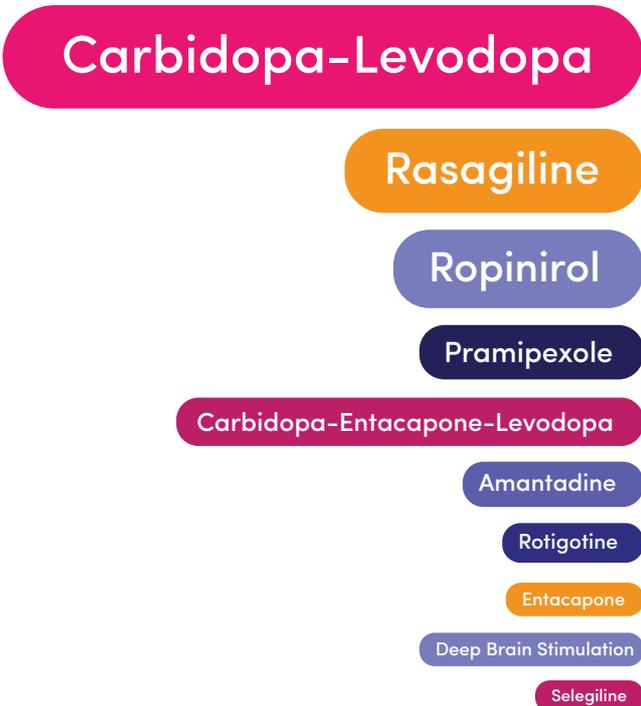

Mick, 66yrs from London

What other clinical conditions do people with Parkinson's have?

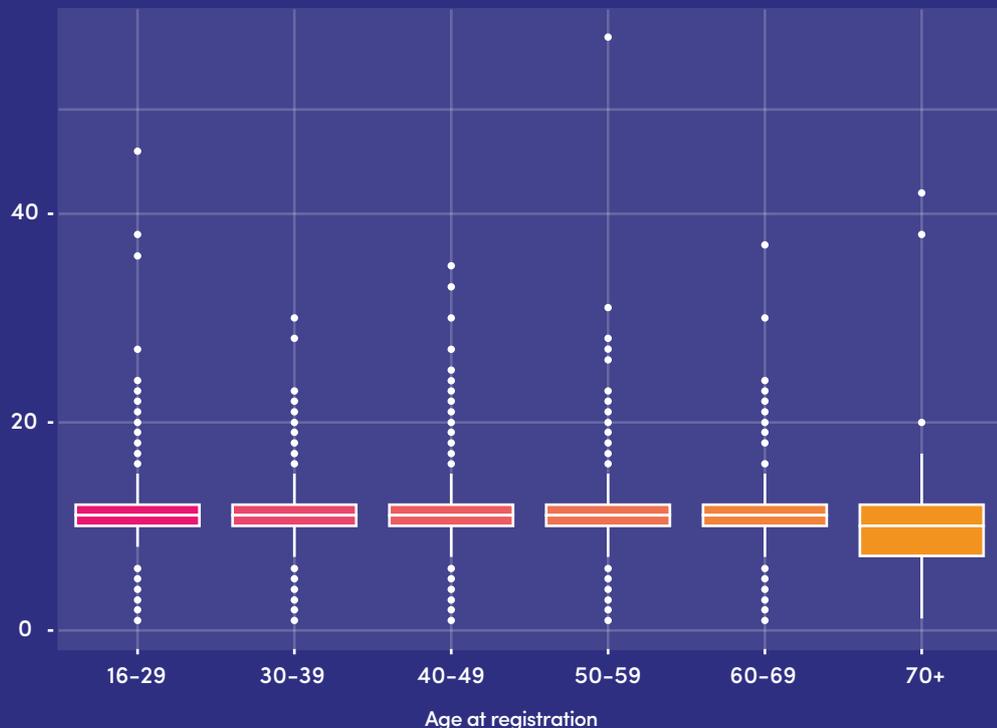

What treatments are people with Parkinson's on?

Proving that age is not a barrier to use of smartphone technology for research

App engagement expressed as the mean number of data points entered daily by participants

Analysis by:

imshealth

What's next?

The study continues to collect data during 2016. We will then remove personal details that could identify participants before making the data available for researchers to use in a range of studies to improve patients' quality of life.

100 for Parkinson's
A global study for everyone

Citizen science observational study for people with Parkinson's, carers and supporters. Participants track for 100 days using uMotif, donating their data for research.

umotif

The world's leading platform to measure patient's health, outcomes and experience. Clinically proven and globally accredited to capture rich health data across a range of conditions.
