

Job Description

Job title:	Automation Engineer
Reports to:	Lead Tester
Department:	Engineering
Work location:	London

About uMotif

uMotif's mission is to put patients at the centre of research by building data capture solutions people love to use. Designed with patients for patients, the uMotif platform supports data capture for each phase of clinical research across all therapeutic areas. Over 22,000 participants use our applications to track and submit e-consent, symptom, eCOA, ePRO, and wearable device data. With expertise in engaging patients and fast deployments, we work with 10 of the top 20 global pharmaceutical companies to power large real-world evidence (RWE) and virtual studies.

Job Summary

As we scale as an organisation we are looking for a motivated and talented automation engineer to join our team.

We are offering the opportunity to work within our multi-disciplinary engineering team to support the delivery of our patient-centric platform. You will be an integral part of our testing team responsible for UI level automation of our mobile applications and web services. The role will bring plenty of interesting technical challenges and provide the opportunity for personal growth.

We are looking for someone who:

- Is passionate about technology and keeps up with progressing innovations across the industry
- Has excellent interpersonal and communication skills
- Has a positive "can-do" attitude
- Has experience implementing one of: Webdriver.io, Appium, or Selenium WebDriver
- Writes high-quality code in Javascript (TypeScript experience preferable)
- Is capable of managing time and prioritising tasks
- Has worked with Jira and GitLab in collaborative environments

Responsibilities

- Writing reliable, declarative, and deterministic test cases expressed using the Gherkin syntax
- Creating test cases powering test automation in mobile applications and simulators on Appium and web services on Webdriver.io
- Scaling test suites to cover multiple mobile devices, browsers, and OSs
- Providing support and training to other testers in their roles (manual to automation skills)
- Delivering high-quality code and contributing to code reviews
- Supporting iterative product development through agile delivery teams and frameworks

Requirements

- Experience in Web and Mobile test automation using Javascript (or TypeScript)
- Good knowledge of test automation design patterns such as Page Object Model
- Ability to work in a cross-functional team
- Exposure to Agile methodologies

Nice to have

- CI/CD
- Atlassian Suite
- Previous experience in a regulated industry
- Non-functional testing experience such as Performance, Security, and Accessibility
- Commercial experience with applications that use encryption and secure communication

What we offer

- 25 days holiday per year, plus an additional day off for your birthday
- Bupa private medical insurance
- Pension contribution
- Share options
- Cycle to work scheme
- 'uToken' annual lifestyle bonus
