School of Life and Medical Sciences

Title of Programme: Medical Education and Medical Simulation

Programme Code: LMMEMSM

Programme Specification

This programme specification is relevant to students entering:
23 September 2019

Associate Dean of School (Academic Quality Assurance):
Philomena Shaughnessy

Signature

A programme specification is a collection of key information about a programme of study (or course). It identifies the aims and learning outcomes of the programme, lists the modules that make up each stage (or year) of the programme, and the teaching, learning and assessment methods used by teaching staff. It also describes the structure of the programme, its progression requirements and any programme-specific regulations. This information is therefore useful to potential students to help them choose the right programme of study, to current students on the programme, and to staff teaching and administering the programme.

Programme Specification  Master of Science Health and Medical Education / Health and Medical Simulation

This programme specification (PS) is designed for prospective students, enrolled students, academic staff and potential employers. It provides a concise summary of the main features of the programme and the intended learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the teaching, learning and assessment methods, learning outcomes and content for each module can be found in Definitive Module Documents (DMDs) and Module Guides.

FHEQ level of award 7
Language of Delivery English

A. Programme Rationale

A Master of Health and Medical Education programme has been running since the academic year 2006/7, and the MSc Health and Medical Simulation since 2010/11. The students are from a range of health and care professional backgrounds. These students have included medical doctors, nurses, midwives and allied health professionals. It’s useful to note that a wide range of health professionals have accessed the programme, for example: simulation educators, critical care outreach nurses and resuscitation officers.

The Master of Science (MSc) Health and Medical Education and Master of Science (MSc) Health and Medical Simulation programmes have been developed to meet the needs of practitioners with a special interest in medical education or simulation-based medical education whilst benefiting from shared, inter-professional learning.

Each pathway is aimed at practitioners wanting to undertake further specialist development and expand their career aspirations in either medical education or simulation-based medical education, providing an inter-professional and intra-professional workforce focus.
Master of Science Health and Medical Education

This programme has been developed to prepare clinicians and health and care professionals for their role as clinical educators and assessors. It is intended to develop skills in providing education within the working environment. It provides inter-professional working opportunities for the study of key aspects of medical education. It is useful for any medical, health or social care professional with an interest in developing their education knowledge and skills.

This programme offers maximum flexibility and choice for busy health professionals. The content is delivered through a combination of classroom-based sessions, e-learning and work-based learning. There are both compulsory (mandatory) and optional modules. Additionally, individual modules are available to those with an interest in a specific educational area. Modules in a range of innovative and globally emerging medical education trends are offered and the master’s level programme prepares students for doctoral level study. This programme is developing a national (and international) standing and students from all parts of the UK, EU and global communities access this exciting and pioneering medical education course.

Master of Science Health and Medical Simulation

This innovative and contemporary programme is designed to prepare medical doctors and other healthcare professionals with a specialist interest in simulation based medical simulation. In the context of technology enhanced learning, the Department of Health is committed to promoting simulation based medical education as a means of increasing patient safety through the reduction of medical error and harm.

In addition to being a highly sought after method of learning and teaching, clinical simulation (both high and low fidelity) is seen as an effective method of reducing clinical risk. This programme will provide students with the skills to maximize the use of simulation based medical education, act as consultants in building their own simulation provision and the use of simulation as a teaching tool in order to enhance the knowledge, skills and experiences of others.

Postgraduate Medicine has been highly evaluated for its standard of teaching and student support and students will benefit from using an expanding range of simulation facilities supported by expert academic, clinical staff and technical staff.

B. Educational Aims of the Programme

The programme has been devised in accordance with the University's graduate attributes of programmes of study as set out in UPR TL03.

Master of Science Health and Medical Education

Additionally this programme aims to:

- Develop a systematic advanced knowledge of the application of health and medical education to practice, specifically in the context of multi-professional and inter-professional working, in the contemporary healthcare setting.
- Develop a systematic advanced knowledge and application of key educational issues, theories and trends in contemporary health and medical education.
- Develop the ability to critically analyse contemporary complex educational issues, theories and trends in health and medical education.
- Develop the appropriate methods of enquiry and skills required to research and advance practice in health and medical education, using an in-depth, current and relevant evidence base.
Master of Science Health and Medical Simulation

Additionally this programme aims to:

- Provide students with the knowledge and skills required to utilise high, medium and low fidelity simulation as a training and educational tool in order to improve the knowledge, skills and experiences of others.
- Enable students to empower others to transfer learning acquired in simulation scenarios to the workplace in order to increase patient safety and improve the quality of services.
- Evaluate the effectiveness of their teaching in simulation settings on the knowledge and skills of other health care practitioners in order to increase patient safety and improve the quality of services.
- Critically appraise best evidence in order to inform and develop practice in simulation based medical education

C. Intended Learning Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills and other attributes in the following areas. The programme outcomes are referenced the Frameworks for Higher Education Qualifications of UK Degree-Awarding Bodies (2014), and relate to the typical student. Additionally, the SEEC Credit Level Descriptors for Further and Higher Education (2016) have been used as a guiding framework for curriculum design.

Master of Science Health and Medical Education

<table>
<thead>
<tr>
<th>Knowledge and Understanding of:</th>
<th>Teaching/learning methods &amp; strategies</th>
<th>Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>A1.Key historical concepts of medical education and education theory.</td>
<td>Acquisition of knowledge and understanding is through a combination of traditional, taught lectures with online and multimedia support and via a combination of lectures (A1 and A3-A5), small group work A1 and A2), online tutorial support and critical reflection (A4-A5).</td>
<td>Knowledge and understanding are assessed through a combination of written assignment (A1-A2 and A5) and critical and reflective analysis (A1-A5).</td>
</tr>
<tr>
<td>A3.A deep and systematic understanding of medical education within own practice.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A4.The links between these educational and medical educational theories and practice.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A5.Issues surrounding global medical education and relevance to own practice.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Intellectual skills:

<table>
<thead>
<tr>
<th>Teaching/learning methods &amp; strategies</th>
<th>Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
B1. Independently source appropriate medical education evidence from a range of sources.

B2. Critically appraise relevant, contemporary (and possibly contradictory) research medical education evidence.

B3. Develop critical responses to medical education issues.

B4. Incorporate a critical ethical dimension to own and others’ teaching and learning practice.

B5. Demonstrate originality in the application of knowledge, together with a practical understanding of how established techniques of research and enquiry are used to create and interpret knowledge in medical education.

Some intellectual skills are developed through methods and strategies outlined in section A, above.

Analysis, problem solving and modeling skills (B1-B5). In addition, B4 is further developed through the use of ethical frameworks and analyses.

Throughout, the learner is strongly encouraged and supported to develop intellectual skills further by independent study.

Intellectual skills are assessed through critical reflection and examination of own practice, using ethical frameworks and boundaries. These skills are assessed via written assignment (B1-B5) based on own practice and analysis of current, relevant literature.

### Practical skills

**Teaching/learning methods & strategies**

Practical skills are developed through observed teaching session(s) (C1) and assessment feedback (C2).

ICT skills are developed through the use of ICT learning tools (C4) and learning events (C5).

Throughout, the learner is expected to consolidate their development of practical computing and ICT skills by use of online learning opportunities and literature searches and analyses.

Practical skills are assessed through observed and self-analysis of teaching session(s) (C1) and critically analyzed feedback (C2). Formation and evaluation of ICT and simulation tools are evaluated (A4-5) and written assignments are assessed against level 7 criteria (C3).

| C1. Plan and deliver a teaching session, including writing a lesson plan. |
| C2. Assess and give feedback for a teaching session. |
| C3. Produce original critical reports on medical education theories and practice. |
| C4. Use Information Communication and Technology to support learning and teaching. |
| C5. Construct, select, organize and run high and low fidelity learning sessions. |

### Transferable skills

**Teaching/learning methods & strategies**

Transferable skills are assessed through critical reflection and examination of own practice, using ethical frameworks and boundaries. These skills are assessed via written assignment (B1-B5) based on own practice and analysis of current, relevant literature.

| Transferable skills: |
| Teaching/learning methods & strategies |
| Assessment |

Master’s Programme Specification / December 2018 / AS Review Date June 2018
D1. Critically reflect on own practice and learning to enhance lifelong learning.
D2. Demonstrate the importance of highly-developed intra and inter-disciplinary communication
D3. Operate as an effective leader or team member as part of an inter-professional, multi-agency team that can clarify roles & responsibilities
D4. Reflect upon, identify and solve intellectual and professional problems using the full range of professional resources available

Transferable skills are developed through written reports and analyses (D1-D2) and individual and group work, both online and face-to-face (D3).
In addition, the preparation for higher-level study is developed through the use of research ready projects (D4).
Throughout, the learner is encouraged to develop transferable skills by maintaining a record of evidence and completing a personal development plan.

### Postgraduate Certificate Health and Medical Education

Practical skills are developed through observed teaching session(s) (C1) and assessment feedback (C2).

Throughout, the learner is expected to consolidate their development of practical computing and ICT skills by use of online learning opportunities and literature search and analysis.

Practical skills are assessed through observed and self-analysis of teaching session(s) (C1) and critically analyzed feedback (C2). Written assignments are assessed against level 7 criteria (C3).

Practical skills are assessed through observed and self-analysis of teaching session(s) (C1) and critically analyzed feedback (C2). Written assignments are assessed against level 7 criteria (C3).

Transferable skills are developed through written reports and analyses (D1-D2) and individual and group work, both online and face-to-face (D3).

Throughout, the learner is encouraged to develop transferable skills by maintaining a record of evidence.

Transferable skills are assessed through a range of written and practical assessments built into the curriculum (D1-D3). These include critical analyses of practical sessions.
**Master of Science Health and Medical Simulation**

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills and other attributes in the following areas. The programme outcomes are referenced the Frameworks for Higher Education Qualifications of UK Degree-Awarding Bodies (2014), and relate to the typical student. Additionally, the SEEC Credit Level Descriptors for Further and Higher Education 2010 have been used as a guiding framework for curriculum design.

### Knowledge and Understanding of:

<table>
<thead>
<tr>
<th>A1. A range of educational concepts, theories and frameworks applicable to medical and healthcare practice.</th>
</tr>
</thead>
<tbody>
<tr>
<td>A2. The evidence base for the use of models of debriefing applicable to simulation based medical education in the planned development of health care professionals.</td>
</tr>
<tr>
<td>A3. Leadership and innovation in the provision of inter-professional, multi agency and multidisciplinary simulation based medical education.</td>
</tr>
<tr>
<td>A4. The physical, social and emotional factors affecting the ability to learn in simulated and other educational settings.</td>
</tr>
<tr>
<td>A5. The ethical and governance issues in simulation education and training in relation to professional practice and patient safety.</td>
</tr>
</tbody>
</table>

### Teaching/learning methods & strategies

- Acquisition of knowledge and understanding (A1-A5) is through a combination of interactive lectures, online multimedia support, small group work, tutorial support and critical reflection.
- The learner is encouraged to undertake independent study to supplement and consolidate what is being taught/learnt and to broaden their individual knowledge and understanding of the subject.
- Work related experience will also be utilized in order to ensure that scenarios used for simulation training and education are current and based on practice.

### Assessment

- Knowledge and understanding (A1-A5) are assessed through a combination of critical and reflective analysis (written assignment) and in provision of an appropriate simulation scenario.
<table>
<thead>
<tr>
<th>Intellectual skills - able to:</th>

Throughout, the learner is encouraged to develop intellectual skills further by independent study.
D. Programme Structures, Features, Levels, Modules, and Credits

Master of Science Health and Medical Education

The programme is offered in full time (12 - 14 months) and part time (2-5 years) modes, also as individual modules, with intakes in Semester A or B, and leads to the award of a Master of Science Health and Medical Education. Entry is normally at level 7. Intake is typically Semester A and / or Semester B.

Master of Science in Health and Medical Simulation

The programme is offered in full time (12 - 14 months) and part time (2-5 years) modes, also as individual modules, with intakes in Semester A or B, and leads to the award of a Master of Science Health and Medical Simulation. Entry is normally at level 7. Intake is typically Semester A and / or Semester B.

Postgraduate Certificate Health and Medical Education

The award is offered in full time (4 months) and part time modes (18 months), and leads to the award of Postgraduate Certificate Health and Medical Education. Entry is normally at level 7. Intake is typically Semester A and / or Semester B.

Postgraduate Certificate Human Factors in Health and Patient Safety

The award is offered in full time (4 months) and part time modes (18 months), and leads to the award of Postgraduate Certificate Human Factors in Health and Patient Safety. Entry is normally at level 7. Intake is typically Semester A and / or Semester B.

Programme Structures

The programme structure and progression information below, Tables 1a (i, ii) are provided for the awards associated with Health and Medical Education. Tables 1a (iii, iv) are provided for the awards associated with Health and Medical Simulation

Any interim awards for Health and Medical Education are identified in the Table labeled 1b (i) and, for the Health and Medical Simulation pathway, in Table 1b (ii).

The Programme Learning Outcomes detailed above are developed and assessed through the constituent modules. Tables 2a (in section 2) identifies where each learning outcome is assessed for the Health and Medical Education pathways and Table 2b identifies where each learning outcome is assessed for the Health and Medical Simulation pathways.

Masters and Diploma awards can be made "with Distinction" or "with Commendation" where criteria as described in **UPR AS14**, Section D and the students' handbook are met.
Outline Masters of Science Health and Medical Simulation Programme Structure

Master of Science Health and Medical Simulation

The programme is offered in full time (12 - 14 months) and part time (2-5 years) modes, also as individual modules, with intakes in Semester A or B, and leads to the award of a Master of Science Health and Medical Simulation. Entry is normally at level 7. Intake is typically Semester A and / or Semester B.

Programme Structure

The programme structure and progression information below, Tables 1a(iii) and 1a(iv), Table 1b(ii) is provided for the awards, including interim awards.

</table>

The outcomes of the Interim Postgraduate Certificate Health and Medical Simulation are dependent on specific module completion. For learning outcomes addressed by specific modules please refer to Table 2b.
Masters and Diploma awards can be made "with Distinction" or "with Commendation" where criteria as described in UPR AS14, Section D and the students' handbook are met.

Programme-specific assessment regulations

The programme is compliant with the University's academic regulations (in particular, UPR AS11, UPR AS12/UPR AS13 (delete as applicable) and UPR AS14) with the exception of those listed below, which have been specifically approved by the University:

Master of Science Health and Medical Education

- Modules with a generic focus e.g. Evidence Based Practice (7LMS0251), Healthcare Disciplines Project (7LMS0160), must relate to Health and Medical Education according to the discipline of the student and fulfill at least three of the overall learning outcomes of the programme.

- Students must pass all compulsory modules for the programme on which they are registered in order to obtain the relevant interim or final award.

E. Management of Programme & Support for student learning

Management

The programme is managed and administered through:
- An Associate Dean of Academic Quality Assurance
- A Head of Department
- A programme tutor who is responsible for the day to day management and admissions to the course
- A school administrator to deal with day to day administration associated with the programme
- A programme committee, the membership of which includes:
  - An admissions tutor
  - Programme leader
  - Programme administrator
  - Module leader(s)
  - Student representative(s)
  - Representative from Learning and Information Services
  - Representative(s) from practice.

Support

Students are supported by:
- A named programme leader
- Guided student-centred learning through the use of StudyNet
- Access to a range of online literature and search databases
- A range of videos intended to support learning
- The Students' Union
- Student representatives on programme committees
- A designated programme administrator
- An induction at the beginning of the programme
- Additional English support from an English Language Department
- An extensive Learning Resources Centre, incorporating a library and computer centre
- A substantial Student Centre that provides advice on issues such as finance, University regulation, legal matters, accommodation, international student support, etc
- Office of Dean of Students, incorporating Chaplaincy, Counselling and Nursery
- Medical Centre
- A Mathematics drop-in Centre
- A School Disabled Student Coordinator
- An Equal Opportunities Officer
- A Careers Employment & Enterprise service
F. Other sources of information

In addition to this Programme Specification, the University publishes guidance to registered students on the programme and its constituent modules:

- A Programme (or Student) Handbook;
- A Definitive Module Document (DMD) for each constituent module;
- A Module Guide for each constituent module.
- University of Hertfordshire Course website: [http://www.herts.ac.uk/courses/](http://www.herts.ac.uk/courses/)
- External Quality Review report website: [http://www.qaa.ac.uk/reviews-and-reports/provider?UKPRN=10007147#.VCFXlha_hSU](http://www.qaa.ac.uk/reviews-and-reports/provider?UKPRN=10007147#.VCFXlha_hSU)
- Professional or Statutory Regulatory Body information (Higher Education Academy): [https://www.heacademy.ac.uk](https://www.heacademy.ac.uk)
- University of Hertfordshire Academic Quality Office website: (StudyNet → Staff → Department Lists → Academic Quality Office)
- Learning and Teaching Policy and Graduate Attributes, UPR TL03: [http://sitem.herts.ac.uk/secreg/upr/TL03.htm](http://sitem.herts.ac.uk/secreg/upr/TL03.htm)
- Admissions - Undergraduate & Taught Postgraduate Students, UPR SA03: [http://sitem.herts.ac.uk/secreg/upr/SA03.htm](http://sitem.herts.ac.uk/secreg/upr/SA03.htm)
- Academic Quality, UPR AS17: [http://sitem.herts.ac.uk/secreg/upr/AS17.htm](http://sitem.herts.ac.uk/secreg/upr/AS17.htm)
- Index of UPRs for students: [http://sitem.herts.ac.uk/secreg/upr_azlist_info.htm](http://sitem.herts.ac.uk/secreg/upr_azlist_info.htm)
- School Fitness to Practise policy [http://www.studynt2.herts.ac.uk/crb/co/website84.nsf/Search?openagent=null&search=fitness+to+practice](http://www.studynt2.herts.ac.uk/crb/co/website84.nsf/Search?openagent=null&search=fitness+to+practice)

The [Ask Herts](http://www.studynet1.herts.ac.uk/ptl/common/studentcentre.nsf/Teaching+Documents?OpenView&count=9999&restrictcategory=Academic+Quality/School+Policies) website provides information on a wide range of resources and services available at the University of Hertfordshire including academic support, accommodation, fees, funding, visas, wellbeing services and student societies.

As a condition of registration, all students of the University of Hertfordshire are required to comply with the University's rules, regulations and procedures. These are published in a series of documents called ‘University Policies and Regulations’ (UPRs). The University requires that all students consult these documents which are available on-line, on the UPR web site, at: [http://www.herts.ac.uk/secreg/upr/](http://www.herts.ac.uk/secreg/upr/). In particular, UPR SA07 ‘Regulations and Advice for Students’ Particular Attention - Index’ provides information on the UPRs that contain the academic regulations of particular relevance for undergraduate and taught postgraduate students.
In accordance with section 4(5) of the Higher Education and Research Act 2017 (HERA), the UK Office for Students (OfS) has registered the University of Hertfordshire in the register of English higher education providers. The Register can be viewed at: https://www.officeforstudents.org.uk/advice-and-guidance/the-register/the-ofs-register/. Furthermore, the OfS has judged that the University of Hertfordshire delivers consistently outstanding teaching, learning and outcomes for its students. It is of the highest quality found in the UK. Consequently, the University received a Gold award in the 2018 Teaching Excellence and Student Outcomes (TEF) exercise. This award was made in June 2018 and is valid for up to 3 years. The TEF panel’s report and conclusions can be accessed at: https://www.officeforstudents.org.uk/advice-and-guidance/teaching/tef-outcomes/#/provider/10007147

Other information relevant to the programme

**Master of Science Health and Medical Education**

This programme is intended for a medical and inter-professional market in health fields such as doctors, dentists, paramedics, physiotherapists, radiographers, midwives, pharmacists, advanced care practitioners and nurses. The programme is therefore designed to be flexible to fit in with work commitments. In addition, the learning outcomes for the postgraduate certificate reflect the Higher Education Academy Professional Standards Framework to Fellow level and all standard areas of the Academy of Medical Educators.

Full attendance or online engagement is strongly encouraged, promoted through innovative timetabling and increased use of blended learning materials where appropriate but a minimum of 80% attendance is required. Attendance and engagement of students will be monitored and reported back to relevant authorities.

**Master of Science Health and Medical Simulation**

This programme is intended for a medical and inter-professional market in health fields such as doctors, dentists, paramedics, physiotherapists, radiographers, midwives, pharmacists, advanced care practitioners and nurses. The programme is therefore designed to be flexible to fit in with work commitments.

Full attendance or online engagement is strongly encouraged, promoted through innovative timetabling and increased use of blended learning materials where appropriate but a minimum of 80% attendance is required. Attendance and engagement of students will be monitored and reported back to relevant authorities.

G. Entry requirements

**Master of Science Health and Medical Education**

The normal entry requirements for the programme are:

- A degree in a healthcare discipline (or equivalent) and a recognised professional qualification

and

- The equivalent of 2 years Full Time post qualifying experience (excluding internship).

Additionally:

- All students from non-majority English speaking countries require proof of English language proficiency. A minimum IELTS 6.5 is required with no less than 6.0 in each band, or GCSE in English with minimum grade C.

- All visa applicants are required to submit biometrics and declare any criminal convictions in their Visa Application Form (VAF) which is routinely checked against Home Office and Police National Computer (PNC) databases on admission to the programme.
The programme is subject to the University's Principles, Policies, Regulations and Procedures for the Admission of Students to Undergraduate and Taught Postgraduate Programmes and will take account of University policy and guidelines for assessing accredited prior certificated learning (APCL) and accredited prior experiential learning (APEL).

Master of Science Health and Medical Simulation

The normal entry requirements for the programme are:

- A degree in a healthcare discipline (or equivalent)
- a recognised professional qualification or employment in a relevant area of practice whilst enrolled on the programme

and

- The equivalent of 2 years Full Time post qualifying experience (excluding internship).

Additionally:

- All students from non-majority English speaking countries require proof of English language proficiency. A minimum IELTS 6.5 is required with no less than 6.0 in each band, or GCSE in English with minimum grade C.
- All visa applicants are required to submit biometrics and declare any criminal convictions in their Visa Application Form (VAF) which is routinely checked against Home Office and Police National Computer (PNC) databases on admission to the programme.

**Key:** Learning Outcome, which is assessed as part of the module:

23
**Master of Science Health and Medical Education**

**KEY TO PROGRAMME LEARNING OUTCOMES**

**Knowledge and Understanding of**

A1. Key historical concepts of medical education and education theory.
A3. A deep and systematic understanding of medical education within own practice.
A4. The links between these educational and medical educational theories and practice.
A5. Issues surrounding global medical education and relevance to own practice.

**Practical Skills**

C1. Plan and deliver a teaching session, including writing a lesson plan.
C2. Assess and give feedback for a teaching session.
C3. Produce original critical reports on medical education theories and practice.
C4. Use Information Communication and Technology to support learning and teaching.
C5. Construct, select, organize and run high and low fidelity skills learning sessions.

**Intellectual Skills**

B1. Independently source appropriate medical education evidence from a range of sources.
B2. Critically appraise relevant, contemporary, and possibly contradictory, research medical education evidence.
B3. Develop critical responses to medical education issues.
B4. Incorporate a critical ethical dimension to own and others' teaching and learning practice.
B5. Demonstrate originality in the application of knowledge, together with a practical understanding of how established techniques of research and enquiry are used to create and interpret knowledge in medical education.

**Transferable Skills**

D1. Critically reflect on own practice and learning to enhance lifelong learning
D2. Demonstrate the importance of highly-developed intra and interdisciplinary communication
D3. Operate as an effective leader or team member as part of an inter-professional, multi-agency team that can clarify roles & responsibilities
D4. Reflect upon, identify and solve intellectual and professional problems using the full range of professional resources available

**Key:** Learning Outcome, which is assessed as part of the module
Master of Science Health and Medical Simulation

KEY TO PROGRAMME LEARNING OUTCOMES

Knowledge and Understanding of
A1. A range of educational concepts, theories and frameworks applicable to medical and healthcare practice.
A2. The evidence base for the use of models of debriefing applicable to simulation based medical education in the planned development of health care professionals
A3. Leadership and innovation in the provision of inter-professional, multi-agency and multidisciplinary simulation based medical education
A4. The physical, social and emotional factors affecting the ability to learn in simulated and other educational settings
A5. The ethical and governance issues in simulation education and training in relation to professional practice & patient safety

Intellectual Skills
B1. Critically evaluate and synthesize the evidence and literature base underpinning simulation based medical education and apply the conclusions to simulation based medical education programmes
B2. Critically evaluate personal performance and the performance of others in order to enhance professional practice, team working and patient safety
B3. Critically evaluate research/evidence in the field of simulation and its application to practice, with a view to generation of new research questions/professional perspectives/educational approaches
B4. Critically appraise and prioritize training and educational interventions in terms of their effectiveness, efficiency and economy in order to ensure best use of resources
B5. Demonstrate originality in the application of knowledge, together with a practical understanding of how established techniques of research and enquiry are used to create and interpret knowledge in medical simulation

Practical Skills
C1. Construct, select, organize and run an authentic simulation scenario to an appropriate participant.
C2. Select and operate appropriate simulation equipment matched to the learning
C3. Demonstrate effective and sensitive debriefing skills
C4. Demonstrate ethically sound practice in relation to performance and professional practice

Transferable Skills
D1. Critically reflect on own practice and learning to enhance lifelong learning
D2. Demonstrate the importance of highly-developed intra and inter-disciplinary communication
D3. Operate as an effective leader or team member as part of an inter-professional, multi-agency team that can clarify roles & responsibilities
D4. Reflect upon, identify and solve intellectual and professional problems using the full range of professional resources available
