School of Health and Social Work

Title of Programme: MSc Diagnostic Radiography & Imaging (Pre-registration)

Programme Code: HSRGIM

Programme Specification

This programme specification is relevant to students entering:
10 January 2022

Associate Dean of School (Academic Quality Assurance):
Cheryl Holman

Signature

A programme specification is a collection of key information about a programme of study (or course). It identifies the aims and learning outcomes of the programme, lists the modules that make up each stage (or year) of the programme, and the teaching, learning and assessment methods used by teaching staff. It also describes the structure of the programme, its progression requirements and any programme-specific regulations. This information is therefore useful to potential students to help them choose the right programme of study, to current students on the programme, and to staff teaching and administering the programme.

Programme Specification MSc Diagnostic Radiography & Imaging (Pre-registration)

This programme specification (PS) is designed for prospective students, enrolled students, academic staff and potential employers. It provides a concise summary of the main features of the programme and the intended learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the teaching, learning and assessment methods, learning outcomes and content for each module can be found in Definitive Module Documents (DMDs) and Module Guides.

Section 1

A. Programme Rationale
The overall aim for the Pre Reg MSc course is to produce competent and forward-thinking radiographers. The graduates from the programme will be evidence-based practitioners who will provide a high standard of diagnostic imaging and patient care. Successful graduates will demonstrate the clinical and knowledge-based skills required to practice diagnostic radiography, fully equipped with critical thinking, decision making and research skills. This will enable them to work collaboratively and effectively in a dynamic and rapidly changing modern healthcare system, instigating and supporting change.
Graduates will be equipped with the skills, knowledge and competencies to be eligible to apply for registration as diagnostic radiographers with the Health & Care Professions Council and be eligible for membership of the Society and College of Radiographers (SCoR).

B. Educational Aims of the Programme
The programme has been devised in accordance with the University’s graduate attributes of programmes of study as set out in UPR TL03.

Additionally this programme aims to:
• enable students to develop their intellectual potential and professional expertise in diagnostic radiography and imaging, and to recognise the importance of continued professional development and life-long learning.

The programme further aims to ensure that graduates possess the knowledge, skills and competencies as set out in the HCPC, SCoR and QAA Benchmark Statements required for eligibility to apply for state registration and professional body membership.

C. Intended Learning Outcomes
The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills and other attributes in the following areas. The programme outcomes are referenced to the QAA Benchmark Statements for Radiography, the Frameworks for Higher Education Qualifications of UK Degree-Awarding Bodies (2014), and relate to the typical student. Additionally, the SEEC Credit Level Descriptors for Further and Higher Education (2016) have been used as a guiding framework for curriculum design.
<table>

<tr>
<th>Knowledge and Understanding:</th>
<th>Teaching/learning methods &amp; strategies</th>
<th>Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>On completion of the programme the graduate radiographer will demonstrate a systematic and critical understanding of</td>
<td>Acquisition of all programme outcomes (A1 – A9) is through research-informed teaching and learning activities, e.g. lectures, tutorials, small group work, e-learning activities, interactive multi-professional group work, practical work in laboratories, supervised clinical placement experience, practice-based assessment and self-directed study. At all times the level of support reflects the level of study. Students at level seven are expected to demonstrate responsibility for their learning and utilise problem solving and critical evaluation skills in their approach to assignments. Throughout, the learner is encouraged to undertake independent study both to supplement and consolidate what is being taught/learned and to broaden their individual knowledge and understanding of the subject area.</td>
<td>Knowledge and understanding are assessed through a combination of unseen examinations and assessed in-course assignments including essays, presentations, reports, and clinical practice-based assessments.</td>
</tr>
<tr>
<td>A1 - The role of the diagnostic radiographer in modern healthcare settings and in the inter-professional team.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A2 - Detailed normal structural &amp; functional anatomy, physiology and pathology of the human body including development</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A3 - The behavioural and sociological sciences, and the promotion of social inclusion, that influence communication and respect for service users, and other professionals within the health care team</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A4 - The physical principles of radiation generation, interaction, modification and protection.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A5 - The role of imaging and imaging procedures in the diagnosis and management of disease</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A6 - The risks &amp; benefits of technological equipment used in diagnostic imaging so that equipment choices inform safe and efficient practice.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A7 - The use &amp; applications of specialist imaging examinations and interventions. (To include an understanding of the use and administration of contrast agents and drugs)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A8 - The legislative and ethical frameworks that underpin and support practice. Including recognition of the autonomy and accountability of registration as a diagnostic radiographer</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A9 - The role of the health care professional in the promotion of health and health care education.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Intellectual skills:
On completion of the programme the graduate radiographer will be able to:

| B1 | Analyse and solve problems using appropriate guidelines and research evidence to draw reasoned conclusions and judgements. |
| B2 | Apply & evaluate scientific and ethical principles to the practice of diagnostic radiography. |
| B3 | Evaluate the role of the diagnostic radiographer in the modern healthcare environment and in the overall care of the service user. |
| B4 | Demonstrate a clear understanding of the role of continuing professional development and be able to reflect critically upon their performance and practice. |
| B5 | Participate in audit, evaluate research evidence and synthesise knowledge to support practice in diagnostic imaging. |
| B6 | Demonstrate their ability to make informed, sensitive and ethically sound professional judgments in relation to radiographic practice. |
| B7 | Appraise and critique the factors involved in the delivery of care within the inter-professional team. |
| B8 | Assess patients' needs by justifying requests for examination or treatment according to IR(ME)R 2017, IR(ME) Amendment Regulations 2018, IRR 2017 and BSS requirements. |

Intellectual skills are developed throughout the programme by the methods and strategies outlined in Section A, above. Analysis and problem-solving techniques are developed through tutorial work, laboratory work, participatory learning in multi-professional groups and in-course exercises. These skills are enhanced by critical reflection of their performance in practice. Throughout the learner is encouraged to utilise evidence-based research to support practice, and to further develop intellectual skills by independent study.

### Assessment

Intellectual skills are assessed through a combination of unseen written examinations, practical assessments, and coursework related to practice and clinical decision-making scenarios.

### Practical skills:
On completion of the programme the graduate radiographer will be able to:

| C1 | Manipulate equipment safely & appropriately and undertake quality control/assurance to identify problems. |
| C2 | Demonstrate ability in holistically managing a |

Practical skills are developed through scenario simulation and practical lab work within the university and through Clinical placement learning within the NHS and other healthcare settings working alongside clinical staff and patients.

Practical skills are assessed through a combination of a record of clinical experience in which the student is expected to reflect and evaluate their performance within the clinical environment, Simulated.
patients diagnostic imaging journey from consent to imaging procedure and through to aftercare

C3 - Utilise imaging and accessory equipment appropriately and effectively.
C4 - Generate, manipulate and evaluate images in relation to quality and identify normal/abnormal pathology, formulating appropriate plans of escalation when pathology is identified
C5 - Adapt working practices (where appropriate) to meet the needs of individual patients and situations.
C6 - Undertake the role of the operator and practitioner in accordance with IR(ME)R 2017 and IR(ME) Amendment Regulations 2018
C7 – demonstrate professional skills and competencies necessary for practice to include moving & handling and first aid skills in order to protect the patient, self and others.
C8 - Apply the principles of infection control to working practices

Transferable skills:
On completion of the programme the graduate radiographer will be able to:

<table>
<thead>
<tr>
<th>Transferable skills</th>
<th>Teaching/learning methods &amp; strategies</th>
<th>Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>D1 - Demonstrate effective communication with colleagues, carers and patients, acknowledging their diverse needs. Engages appropriately with information and communication technology</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D2 - Perform as an effective member of an inter-professional team.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D3 - Demonstrate confidence in understanding, manipulating, interpreting and presenting numerical data.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D4 - Gather information from a wide range of relevant sources and use methods of enquiry to collect and interpret data.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D5 – Demonstrate supervision and mentorship skills.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D6 - Demonstrate spatial awareness.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Transferable skills D1-8 are developed through the programme by a combination of lectures, tutorials, seminars, small group work and practical work and simulation in laboratories. Supervised clinical experience and practice-based assessments are undertaken in the clinical placement environment. Throughout, the learner is encouraged to develop transferable skills by maintaining a record of evidence and completing a personal development plan.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Transferable skills are assessed through a range of assignments including coursework reports, oral presentations and research exercises as well as assessment in the clinical setting.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
D. Programme Structures, Features, Levels, Modules, and Credits

The programme is offered as a full time, two year, pre- registration programme and leads to the award of MSc Diagnostic Radiography & Imaging.

Entry is normally at Level 7 with a previous degree in a science related subject. Intake will normally be in Semester B

Professional and Statutory Regulatory Bodies
Successful completion of the programme provides eligibility to apply for Health and Care Professions Council registration as a diagnostic radiographer and membership of the Society and College of Radiographers

Work-Based Learning, including Sandwich Programmes
Clinical based placements are an integral part of completion of the programme.

Programme Structure
The programme structure and progression information below (Table 1a and 1b) is provided for the award. Any interim awards are identified in Table 1b. The Programme Learning Outcomes detailed above are developed and assessed through the constituent modules. Table 2 identifies where each learning outcome is assessed.

<td></td>
</tr>
</tbody>
</table>

Please note that interim awards do not allow entry onto the HCPC register as a Diagnostic Radiographer

Masters and Diploma awards can be made "with Distinction" or "with Commendation" where criteria as described in UPR AS14, Section D and the students' handbook are met.

Programme-specific assessment regulations

The programme is compliant with the University's academic regulations (in particular, UPR AS11, UPR AS12/UPR AS13, (delete as applicable) and UPR AS14) with the exception of those listed below, which have been specifically approved by the University:

- Final compensatory credit (exemption from UPR AS14 section D4.4) and/or intra-module compensation is not permitted. As per PSRB requirements.
- At each academic level, the student will normally be required to have passed 45 credits (at first attempt/referral) to be permitted a re-enrolment opportunity and hence repeat failed modules.
• Students are not normally permitted to “trail” modules from one year to the next year (exemption from UPR AS14, D3). Progression from one year to the next normally depends on meeting the prerequisite requirement of achieving 90 credits in the preceding year of study; where, in exceptional circumstances, it is considered by the Exam Board that the student may progress with less than 90 credits, the student must have passed all modules with a clinical component.

Further points of clarification and interpretation relevant to this specific programme are given below:

• Length of student registration is a maximum of four years (exemption from UPR AS14, D3.9). Length of registration of international students studying under a Tier 4 visa have a maximum of four years.
• Students are normally expected to attend all taught sessions of each module undertaken.
• In order to progress, students must normally complete 100% of clinical placement attendance for each year of study as specified by the programme year plan. Placement attendance is managed in accordance with the SCoR’s Student Radiographer Attendance Management Guidelines (2011).
• Successful completion of the minimum requirements of the clinical experience record over the programme period, demonstrating competence in a range of diagnostic imaging examinations, is essential for receipt of award.
• If a module with a clinical component has been failed, in repeating the module, the student should normally complete all of the clinical time specified by the year plan for the respective year of study. If the module(s) to be repeated has only academic content the student must normally complete a minimum of 50% of the total clinical time specified by the year plan. If a clinical assessment has been failed at first attempt, the student must complete a minimum of 4 weeks additional clinical time where relevant in order to retake the assessment.
• Students may be withdrawn from the programme if they fail to fulfil the requirements for university study and clinical practice, including undertaking barring and enhanced disclosure checks, attending occupational health screening when referred and completing a statutory declaration (as appropriate). In addition, students will not be permitted to attend clinical placement until they have attended the mandatory Cardio-Pulmonary Resuscitation and Moving and Handling training sessions.
• The external examiner appointed to the programme must be appropriately experienced and qualified and be from the relevant part of the HCPC Register, in accordance with the HCPC Standards of Education & Training.

E. Management of Programme & Support for student learning

Management
The programme is managed by;

• A Professional Lead who advises on issues pertinent to the programme and line manages staff on the programme
• A Programme Leader (from the appropriate section of the HCPC register) who has day to day responsibility for managing the programme in liaison with the Professional Lead & Head of Department
• A Clinical Practice Lead who has responsibility for managing clinical placement requirements
• Year Tutors who are responsible for a specific cohort of the programme
• An Admissions Tutor who has specific responsibility for managing the admissions and recruitment process
• An Administration team to deal with day to day administration associated with the programme
• Module Leaders who are responsible for co-ordination and management of individual modules
• A programme committee, the membership of which includes academic and clinical staff, service managers, service users and student representatives

Support
Students are supported by:

• Programme Leader and Year tutors to help students understand the programme structure
• Personal Tutors to provide academic and pastoral support
• An extensive Learning Resources Centre, providing a modern study environment
• Canvas/StudyNet, a versatile online interactive intranet and managed learning environment
• Access to extensive digital and print collections of information resources
• A substantial Student Centre that provides advice on issues such as finance, University regulations, legal matters, accommodation, international student support etc.
• Office of the Dean of Students, incorporating Chaplaincy, Counselling and nursery
• Medical Centre
• A Mathematics Drop-in Centre
• A University based Disability Support Student Co-ordinator
• An Equality Unit
• The Students’ Union
• A clinical team responsible for monitoring and organising clinical placements
• Placement supervisors and mentors including a named clinical/practice co-ordinator/educator
• Student representation on programme committee meetings
• Guided student-centred learning through the use of the VLE
• A Careers service for all current students and graduates

F. Other sources of information
In addition to this Programme Specification, the University publishes guidance to registered students on the programme and its constituent modules:
• A Programme (or Student) Handbook;
• A Definitive Module Document (DMD) for each constituent module;

The Ask Herts website provides information on a wide range of resources and services available at the University of Hertfordshire including academic support, accommodation, fees, funding, visas, wellbeing services and student societies.

As a condition of registration, all students of the University of Hertfordshire are required to comply with the University's rules, regulations and procedures. These are published in a series of documents called 'University Policies and Regulations' (UPRs). The University requires that all students consult these documents which are available on-line, on the UPR web site, at: http://www.herts.ac.uk/secret/urp/. In particular, UPR SA07 'Regulations and Advice for Students’ Particular Attention - Index' provides information on the UPRs that contain the academic regulations of particular relevance for undergraduate and taught postgraduate students.

In accordance with section 4(5) of the Higher Education and Research Act 2017 (HERA), the UK Office for Students (OfS) has registered the University of Hertfordshire in the register of English higher education providers. The Register can be viewed at: https://www.officeforstudents.org.uk/advice-and-guidance/the-register/the-ofs-register/. Furthermore, the OfS has judged that the University of Hertfordshire delivers consistently outstanding teaching, learning and outcomes for its students. It is of the highest quality found in the UK. Consequently, the University received a Gold award in the 2018 Teaching Excellence and Student Outcomes (TEF) exercise. This award was made in June 2018 and is valid for up to 3 years. The TEF panel’s report and conclusions can be accessed at: https://www.officeforstudents.org.uk/advice-and-guidance/teaching/tef-outcomes/#/provider/10007147

G. Entry requirements

The normal entry requirements for the programme are:

UK & International applicants should normally have achieved a 2:1 in an honour's degree in a science or health related subject and have studied at level 6 or above within the last five years.

Applicants must have GCSE or equivalent qualifications which includes:
• English Language Grade C/4, Maths Grade C/4 and Science Grade C/4

Accreditation of prior learning and experience via the APEL process can be considered for applicants to this programme
International applicants must have IELTS 7.0 with a minimal score of 6.5 in all sections or Test of English as a Foreign Language (TOEFL). This is a requirement of the Health Care Professions Council (HCPC), the statutory regulator for diagnostic radiography registrants and other professions allied to health.

Students entering the programme must be medically fit to undertake the programme and will therefore require a satisfactory health assessment. In order to comply with the ‘Rehabilitation of Offenders Act’ 1974 and ‘Rehabilitation of Offenders Act 1974 (exceptions) order’ 1975, students require a satisfactory enhanced Disclosure and Barring Service check. Admission to the programme is therefore subject to satisfactory health clearance and DBS (Disclosure and Barring Service) clearance.

Applicants who are successful at shortlisting will be invited to attend an Interview. In addition candidates must have completed a placement visit to a diagnostic radiography department.

The programme is subject to the University’s Principles, Policies and Regulations for the Admission of Students to Undergraduate and Taught Postgraduate Programmes (in UPR SA03), along with associated procedures. These will take account of University policy and guidelines for assessing accredited prior certificated learning (APCL) and accredited prior experiential learning (APEL).

If you would like this information in an alternative format please contact: Louise Hadley. Programme Lead L.hadley@herts.ac.uk

If you wish to receive a copy of the latest Programme Annual Monitoring and Evaluation Report (AMER) and/or the External Examiner’s Report for the programme, please email a request to aqo@herts.ac.uk
### Table 2: Development of Intended Programme Learning Outcomes in the Constituent Modules

This map identifies where the programme learning outcomes are assessed in the constituent modules. It provides (i) an aid to academic staff in understanding how individual modules contribute to the programme aims (ii) a checklist for quality control purposes and (iii) a means to help students monitor their own learning, personal and professional development as the programme progresses.

KEY TO PROGRAMME LEARNING OUTCOMES

Knowledge and Understanding

A1 - The role of the diagnostic radiographer in modern healthcare settings and in the inter-professional team.
A2 - Detailed normal structural & functional anatomy, physiology and pathology of the human body including development
A3 - The behavioural and sociological sciences, and the promotion of social inclusion, that influence communication and respect for service users, and other professionals within the health care team
A4 - The physical principles of radiation generation, interaction, modification and protection.
A5 - The role of imaging and imaging procedures in the diagnosis and management of disease
A6 - The risks & benefits of technological equipment used in diagnostic imaging so that equipment choices inform safe and efficient practice.
A7 - The use & applications of specialist imaging examinations and interventions. (To include an understanding of the use and administration of contrast agents and drugs)
A8 - The legislative and ethical frameworks that underpin and support practice. Including recognition of the autonomy and accountability of registration as a diagnostic radiographer
A9 - The role of the health care professional in the promotion of health and health care education.

Practical Skills

C1 - Manipulate equipment safely & appropriately and undertake quality control/assurance to identify problems.
C2 - Demonstrate ability in holistically managing a patient's diagnostic imaging journey from consent to imaging procedure and through to aftercare
C3 - Utilise imaging and accessory equipment appropriately and effectively.
C4 - Generate, manipulate and evaluate images in relation to quality and identify normal/abnormal pathology. Formulating appropriate plans of escalation when pathology is identified
C5 - Adapt working practices (where appropriate) to meet the needs of individual patients and situations.
C6 - Undertake the role of the operator and practitioner in accordance with IR(ME)R 2017 and IR(ME) Amendment Regulations 2018
C7 - Demonstrate professional skills and competencies necessary for practice to include moving & handling and first aid skills in order to protect the patient, self and others.
C8 - Apply the principles of infection control to working practices

Intellectual Skills

B1 - Analyse and solve problems using appropriate guidelines and research evidence to draw reasoned conclusions and judgements
B2 - Apply & evaluate scientific and ethical principles to the practice of diagnostic radiography.
B3 - Evaluate the role of the diagnostic radiographer in the modern healthcare environment and in the overall care of the service user.

Transferable Skills

D1 - Demonstrate effective communication with colleagues, carers and patients, acknowledging their diverse needs. Engages appropriately with information and communication technology
D2 - Perform as an effective member of an inter-professional team.
D3 - Demonstrate confidence in understanding, manipulating, interpreting and presenting numerical data.
B4 - Demonstrate a clear understanding of the role of continuing professional development and be able to reflect critically upon their performance and practice.

B5 - Participate in audit, evaluate research evidence and synthesise knowledge to support practice in diagnostic imaging.

B6 - Demonstrate their ability to make informed, sensitive and ethically sound professional judgments in relation to radiographic practice.

B7 - Appraise and critique the factors involved in the delivery of care within the inter-professional team.

B8 - Assess patients' needs by justifying requests for examination or treatment according to IR(ME)R 2017, IR(ME) Amendment Regulations 2018, IRR 2017 and BSS requirements.

D4 - Gather information from a wide range of relevant sources and use methods of enquiry to collect and interpret data.

D5 – Demonstrate supervision and mentorship skills.

D6 - Demonstrate spatial awareness.

D7 - Demonstrate effective time management.

D8 - Recognise their own limitations and work within their scope of practice as a diagnostic radiographer acknowledging their role in patient centre care and working with vulnerable patient groups.
