Week 16 – Resolving the Innovator's Contradiction: Creativity Unbound

This is the last of our Sunday posts; our journey is now ending.

This week, to conclude the course, we reflect on what precisely we have learned. You will recall from Week 1:

“Innovators are risk-takers. They push the boundaries of the known world. They are willing to push themselves and their ideas beyond the safe and comfortable. They believe in their ideas and trust themselves to bring these ideas to execution. They are problem solvers and work relentlessly at making things happen.

In essence, being an innovator is not about being smarter and quicker but about being willing to take chances and, at the same time, trusting ourselves to realize them.”

The images you've posted during the past 4 months show how much more control you have achieved over your creative resources. It is now time to assess whether your appetite for risk has increased and whether you have gained in confidence to confront the uncertainty of creativity.

Assignment

Go back to the self-assessment you did in Week 1. You were asked to assess your creative strengths and weaknesses in relation to how you used the three major resources of the creative process: Vision, Design and Technique.

Review your scores and the notes you wrote at the time. What has changed?

Discuss what you've learned by posting a Topic on the Forum for this week:
