

# SAS Programmer

## Could you be our new SAS Programmer?

Well, if you:

- Are considering a change of scenery
- Want a job with a significant degree of variation and flexibility
- Value the freedom it gives to have the opportunity of working from home and perhaps even on part time basis - if preferred
- And can see yourself thriving in a small “Professional Family” of 12 other - really friendly, forthcoming, highly skilled and helpful - colleagues

... the answer could actually be a “yes” – and you should definitely consider reading on - and getting in touch with us.

### **Who we are – professionally:**

We are a Contract Research Organization (CRO) who have specialized in Data Management and Statistics – for more than 10 years, and with an increasing demand for our services.

We offer all Biometrics services required in relation to clinical and device trials.

We are data managers, statistical/SAS programmers and statisticians, and our office is located in Birkerød.

### **Who we are – personally:**

When Bjarne Bodin and Peter Lipczak founded BioStata in 2010 it was with the clear vision of establishing a company build on a deliberately small team (no more than 15 – 20 people).

This was chosen in order to combine the strength of deep expertise normally found in large organizations – with the flexibility and freedom only found in small companies.

Having lived this vision for more than a decade now, we can safely say that some of the keywords describing our working atmosphere are: Trust, helpfulness, open-mindedness, kindness, responsibility, opportunity for influence – and a high degree of professional dedication to what we do.

### **What you can enrich the team with:**

You should have one or more of the following areas of competencies:

- SAS Programming experience.
- Experience (minimum 1 year) with CDISC SDTM/ADaM.

And in addition to the above mentioned:

- Be fluent in English.
- Be able to work structured, independently and with a flexible mindset.

You will be working together with our other programmers, data managers and statisticians in professional trial teams, where we all benefit from combining decades of knowledge and experience.

If you find it appealing, you will also have the opportunity to be our face towards the customer on some projects - ensuring that both external and internal expectations are met.

You will be involved – as a part of the trial team – in a great variety of projects, tasks and customers, where the work is mainly carried out at our office, from home or sometimes at the customer site, depending on the nature of the task and your preferences.

### **So... are you tempted to join us?**

Well – at this point you probably have a much better idea of this, than you did just a few minutes ago...

If you tend towards “yes” – or if you are curious about getting to know more about us and the position – please contact our CEO:  
Bjarne Bodin, [bb@biostata.com](mailto:bb@biostata.com), tel. +45 2023 5778.

We are looking very much forward to hearing from you – and perhaps welcoming you as part of the team...
