

We4Sea is hiring!

Technical consultant

Who are we?

A young company in Delft, making the shipping industry cleaner and more fuel-efficient. Our cloud-based dashboard allows maritime companies to monitor their fleet, and take action to reduce fuel consumption and emissions from their ships by pinpointing technical and logistical issues in their fleet. Using a unique, in-house developed Digital Twin model, we are able to monitor any ship without the need to install hardware onboard.

What do you do?

- You will be the main contact point for customers, analyzing their ships and further needs and converting these in feature requests, together with the development team
- You will be responsible for the onboarding of new customers: setting up accounts, creating Digital Twins and setting up noon report integration together with the development team
- You will perform consultancy projects:
 - Based on customer request you will manage these projects, consisting of creating Digital Twins for customer vessels, performing simulations, interpreting and reporting on the outcome of the simulations

What do you bring?

- Knowledge of the maritime sector, 3-5 years of relevant experience
- A degree in naval architecture, marine engineering or maritime technology
- Programming knowledge (Python or Matlab)
- Good social skills

Who do you work with?

You will work between the sales team and the development team, in a small team of technical support staff.

What do you get?

A challenging job, 32 hours a week/ fulltime. Working in a small team of environmentally aware, international, driven and focused people. The possibility to grow into the role of operations manager. Get to know and work with (inter)national maritime companies. Direct contact with all involved developers, reasonable coffee, a delicious company lunch and a daily ping-pong match. We offer an acceptable salary and you are eligible for participating in our Employee Stock Ownership Program.
