

We4Sea is hiring!

(Medior) Back-end developer

Who are we?

A young company in Delft, making the shipping industry cleaner and more fuel-efficient. Our cloud-based dashboard allows maritime companies to monitor their fleet, and take action to reduce fuel consumption and emissions from their ships by pinpointing technical and logistical issues in their fleet. Using a unique, in-house developed Digital Twin model, we are able to monitor any ship without the need to install hardware onboard.

What do you do?

- *You will develop the backend side of our platform, with focus on new functionalities and APIs as well as existing services and APIs.*
- *You will perform bug fixes*
- *You will keep the backend up to date and well-maintained*

What do you bring?

- *Minimum of 1.5 years relevant Python development work experience*
- *Entry level: experienced Junior or Medior*
- *You care about code quality, low maintenance and development velocity*
- *Experience with web development, web technologies and APIs*
- *Experience with working in an agile development team*
- *A team player, good communicator, a passionate developer*
- *Maritime knowledge and knowledge of physics is a plus*
- *Knowledge about AWS, Nginx and experience in Flask is a plus*

Who do you work with?

You will work with a small team of developers lead by the project manager

What do you get?

A challenging 40 hours a week/ fulltime job.. Working in a small team of environmentally aware, international, driven and focused people.

Get to know and work with (inter)national maritime companies. Direct contact with all involved developers, reasonable coffee, a delicious company lunch and a daily ping-pong match when we get back to the office after COVID-19. We offer an reasonable salary and you are eligible for participating in our Employee Stock Ownership Program.
