

BRIB364.00.BAT

FEATURES:

- Battery powered LED beacon.
- Magnetic base.
- 300-400hrs of operation.
- Dusk/dawn photocell.
- 2 flash patterns (single flash and rotating).
- Hanging point on top of lens.

SPECIFICATION:

Batteries	2x1.5V D (BAT1040)
Operating time	300-400hr
LEDs	20
Flash Patterns	2
Single flash rate	75/min
Rotating flash rate	120/min
Height	126mm
Diameter	108mm
Hanging point diameter	5mm
Lens Colour	Amber
Lens Material	Polycarbonate
Base Material	ABS

Britax Battery Powered LED Mini Beacon

The Britax battery powered LED mini beacon is exclusive to Britax and is ideally suited for the temporary fitting of a beacon to a vehicle. With up to 400 hours of operating time and a magnetic base, the beacon requires no wiring or fittings. Alternatively, the beacon has a 5mm hanging point on top of the lens. Concealed in the base of the beacon there is a white switch to control the inbuilt photocell and a black switch to change the flash pattern.

The dusk/dawn photocell can be used to ensure the beacon only operates at night-time and further extending the operating time. The beacon comes with two flash patterns - a single flash (at 75 flashes/min) and a rotating pattern (at 120 flashes/min).

Britax Part Number: B364.00.BAT

BAT1040

The Britax LED beacon is not supplied with batteries. Don't forget to add a pack of D-cell batteries to your order. BAT1040 is a pack of two Varta High Energy Alkaline batteries.
